Gold Has Late Week Surge as it Nears the US\$1,300 Mark

Precious Metals: Gold recorded over a US\$12 gain during Friday's trading, and encroached upon the US\$1,300 mark for the first time in a month. As we head into the weekend, the precious metal is up 1.48% WoW as it finished at US\$1,294 Friday afternoon, and reached its highest price since October 17th. Silver followed suit as it recorded a 1.35% increase during Friday's trading to finish the week up 2.48% at US\$17.31. Despite some midweek losses, platinum (up 2.28%) and palladium (up 0.02%) also had a positive week finishing at US\$951 and US\$997 per ounce, respectively.

Base Metals: The base metals were down modestly week over week, LME nickel fell the most, down 4.5% WoW, while copper and zinc were down 0.2% and 1.6% WoW, respectively. The decline in nickel marks the largest weekly loss in over two months. The decline in base metals prices was partially due to negative economic data out of China. Last week, China released industrial output, fixed asset investment and retail sales data that missed analyst expectations. According to the National Bureau of Statistics, industrial output was up 6.2% YoY in October. This was down from the 6.6% gain in September and just below analyst estimates of a 6.3% gain. The accumulated growth rate of investment in fixed assets was down to 7.3% YTD in October from the 7.5% YTD recorded in September. Among the base metals equities this week, Teck Resources was the top performer (up 2.6% WoW) following the announcement of a special \$0.40/sh dividend and the announcement of a \$230M share buyback. Most of the base metals equities were down this week with Imperial Metals lagging the pack down 8.2% WoW with the release of third quarter financials. Imperials results missed consensus estimates, reporting a EPS loss of \$0.20 and a CFPS loss of \$0.10 compared to consensus estimates of a loss of \$0.12 and positive \$0.07, respectively.

Liberty Gold Corp. (LGD-T, \$0.45 [Buy Rating, \$1.00 Target Price]) – Further Encouraging Results from the Western and Dip Slope Zones

Mick Carew, PhD | mcarew@haywood.com, Emma Boggio, MSA, CPA, CA, eboggio@haywood.com

Liberty Gold announced drilling results from its 100% controlled Goldstrike oxide gold project in southwestern Utah, with the current results targeting both the Western and the Dip Slope Zone. Goldstrike is a Carlin-style, sediment-hosted gold property and was host to a past-producing mine. The historical Goldstrike mine operated from 1988 to 1994, with 209,000 ounces of gold produced from 12 shallow pits, at an average grade of 1.2 g/t gold. The newly defined Western Zone considers five targets as potentially a single linear gold zone up to 3 kilometres long. The objective of the current drill program in this area is to drill under and adjacent to four historical open pits (Covington, Moosehead, Caribou, and Beavertail) to demonstrate continuity of gold mineralization over the entire zone. The current drill results from the Western Zone are from holes drilled along the north margin of the Moosehead-Caribou pit.

Novo Resources Corp. (NVO-V, \$7.05, [Not Rated]) – Site Visit: Karratha: An Exciting and Unique Gold Discovery

Mick Carew, PhD | mcarew@haywood.com, Emma Boggio, MSA, CPA, CA, eboggio@haywood.com

We recently visited Novo Resources' (NVO-V) Karratha Gold Project in the Karratha region of Western Australia. The Novo story began on in July 2017, when Novo announced the discovery of gold nuggets from trenching at Purdy's Reward. Since then the Company's share price has surged from \$0.96 to \$7.05 today. These gold nuggets are hosted in shallow-dipping (3 to 4 degrees) conglomerate horizons at the base of the Archean Fortescue Group; importantly, these conglomerate units were previously unrecognised in the area. Following the discovery, Novo embarked on an extensive land acquisition program that has resulted in the Company holding ~10,000 km² including several joint venture agreements.

K92 Mining Inc. (KNT-V, Not Rated]) – Commences Drilling at Committee Bay

Share Price: \$0.52

52-week high/low: \$1.17/\$0.41

Average Daily Volume for the Week: 388,080 shares

Market Capitalization: \$82.03 million

Shares Outstanding: 157.75 million

Cash: \$3.0 million (Oct. 2017)

Date of Release: Nov. 14 & 15, 2017

On Tuesday, K92 Mining announced that the first concentrate from Kora production has been shipped to the Port of Lae, pursuant to a new offtake agreement, with the provisional payment (90% of total value of shipment) received by the Company. In the new agreement there includes a provision for the funding of US\$15 million in non-dilutive financing from one of the world's largest commodity trading groups in order to secure the long term offtake for production from the Kora Deposit. This financing is subject to a number of closing conditions, which the two parties have commenced pursuing. However,

prior to the removing of these conditions, K92 has announced that it will ship Kora concentrate under an agreement with interim provisions facilitating the same. The Company anticipates utilizing the US\$15 million to target an expansion of the mining and processing rate to a level envisioned in its PEA release earlier this year. Additionally, following Tuesday's announcement, on Wednesday the Company release drilling results from drill hole KMDD0024 which extended the known Kora mineralization in this Northern Extension over a strike length of approximately 150 metres and a dip extent of approximately 100 metres. Please see Table 1 for full results. The current Kora/Eutompi inferred resource, as defined by previous drilling to date, is 4.36 million tonnes at a grade of 7.3 g/t gold, 35 g/t silver and 2.23% Copper, or 11.2 g/t gold equivalent and is open for expansion at depth and in both directions along strike.

Rating Structure

Each company within an analyst's universe, or group of companies covered, is assigned: (i) a recommendation or rating, usually BUY, HOLD, or SELL; (ii) a 12 month target price, which represents an analyst's current assessment of a company's potential stock price over the next year; (iii) an overall risk rating which represents an analyst's assessment of the company's overall investment risk; and (iv) specific risk ratings or risk profile parameters which in their aggregate support an analyst's overall risk rating. These ratings are more fully explained below. Before acting on our recommendation we caution you to confer with your Haywood investment advisor to determine the suitability of our recommendation for your specific investment objectives, risk tolerance and investment time horizon.

Recommendation Rating

BUY – The analyst believes that the security will outperform other companies in their sector on a risk adjusted basis or for the reasons stated in the research report the analyst believes that the security is deserving of a (continued) BUY rating.

HOLD – The analyst believes that the security is expected to perform in line with other companies in their sector on a risk adjusted basis or for the reasons stated in the research report the analyst believes that the security is deserving of a (continued) HOLD rating.

SELL – Investors are advised to sell the security or hold alternative securities within the sector. Stocks in this category are expected to under-perform other companies on a risk adjusted basis or for the reasons stated in the research report the analyst believes that the security is deserving of a (continued) SELL rating.

TENDER – The analyst is recommending that investors tender to a specific offering for the company's stock.

RESEARCH COMMENT – An analyst comment about an issuer event that does not include a rating or recommendation.

UNDER REVIEW – Placing a stock Under Review does not revise the current rating or recommendation of the analyst. A stock will be placed Under Review when the relevant company has a significant material event with further information pending or to be announced. An analyst will place a stock Under Review while he/she awaits sufficient information to re-evaluate the company's financial situation.

COVERAGE DROPPED – Haywood Securities will no longer cover the issuer. Haywood will provide notice to clients whenever coverage of an issuer is discontinued.

Haywood's focus is to search for undervalued companies which analysts believe may achieve attractive risk-adjusted returns. This research coverage on potentially undervalued companies may result in an outweighed percentage of companies rated as BUY. Management regularly reviews rating and targets in all sectors to ensure fairness and accuracy.

Overall Risk Rating

Very High Risk: Venture type companies or more established micro, small, mid or large cap companies whose risk profile parameters and/or lack of liquidity warrant such a designation. These companies are only appropriate for investors who have a very high tolerance for risk and volatility and who are capable of incurring temporary or permanent loss of a very significant portion of their investment capital.

High Risk: Typically micro or small cap companies which have an above average investment risk relative to more established or mid to large cap companies. These companies will generally not form part of the broad senior stock market indices and often will have less liquidity than more established mid and large cap companies. These companies are only appropriate for investors who have a high tolerance for risk and volatility and who are capable of incurring a temporary or permanent loss of a significant loss of their investment capital.

Medium-High Risk: Typically mid to large cap companies that have a medium to high investment risk. These companies will often form part of the broader senior stock market indices or sector specific indices. These companies are only appropriate for investors who have a medium to high tolerance for risk and volatility and who are prepared to accept general stock market risk including the risk of a temporary or permanent loss of some of their investment capital.

Moderate Risk: Large to very large cap companies with established earnings who have a track record of lower volatility when compared against the broad senior stock market indices. These companies are only appropriate for investors who have a

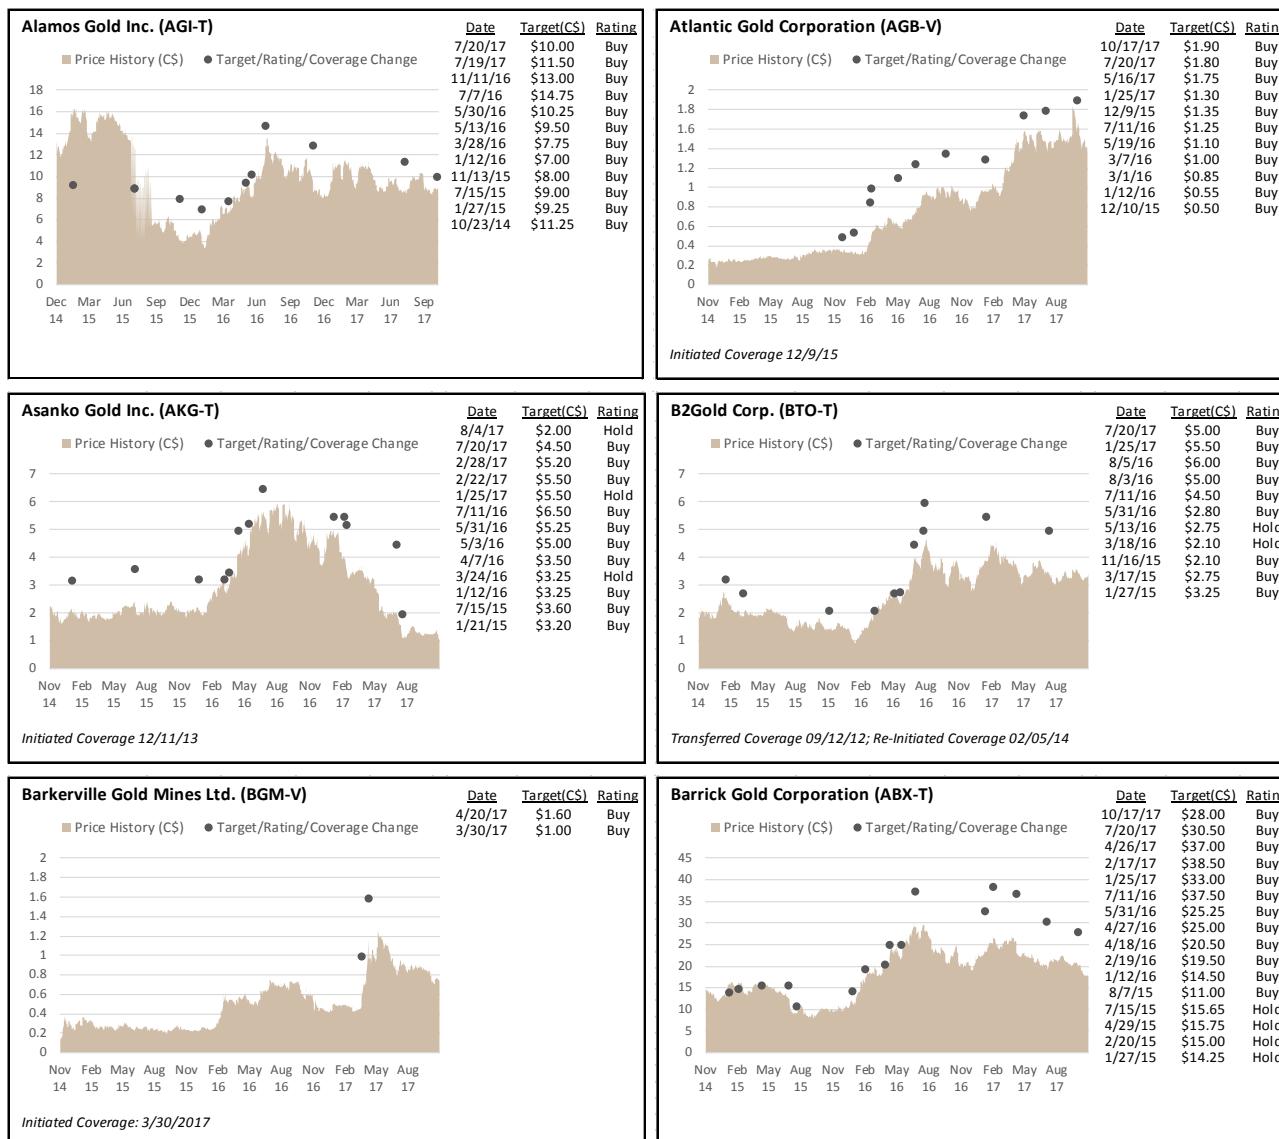

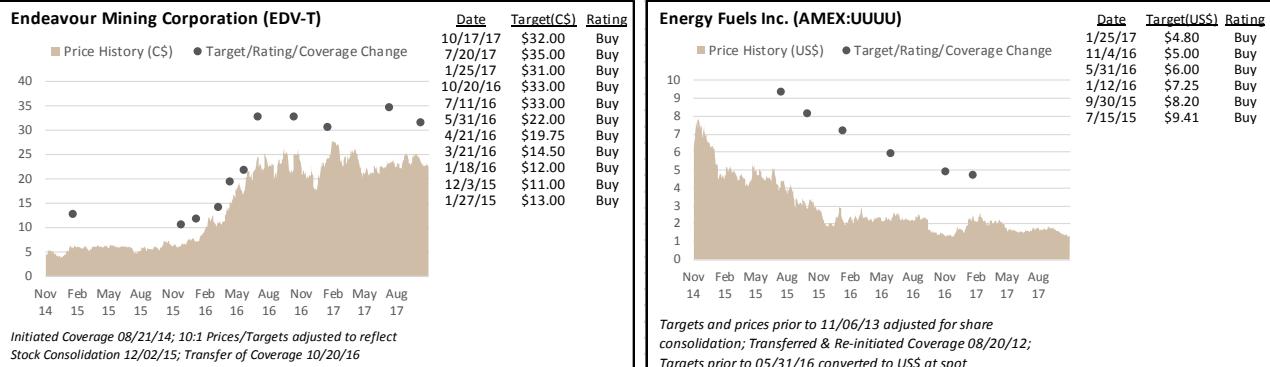

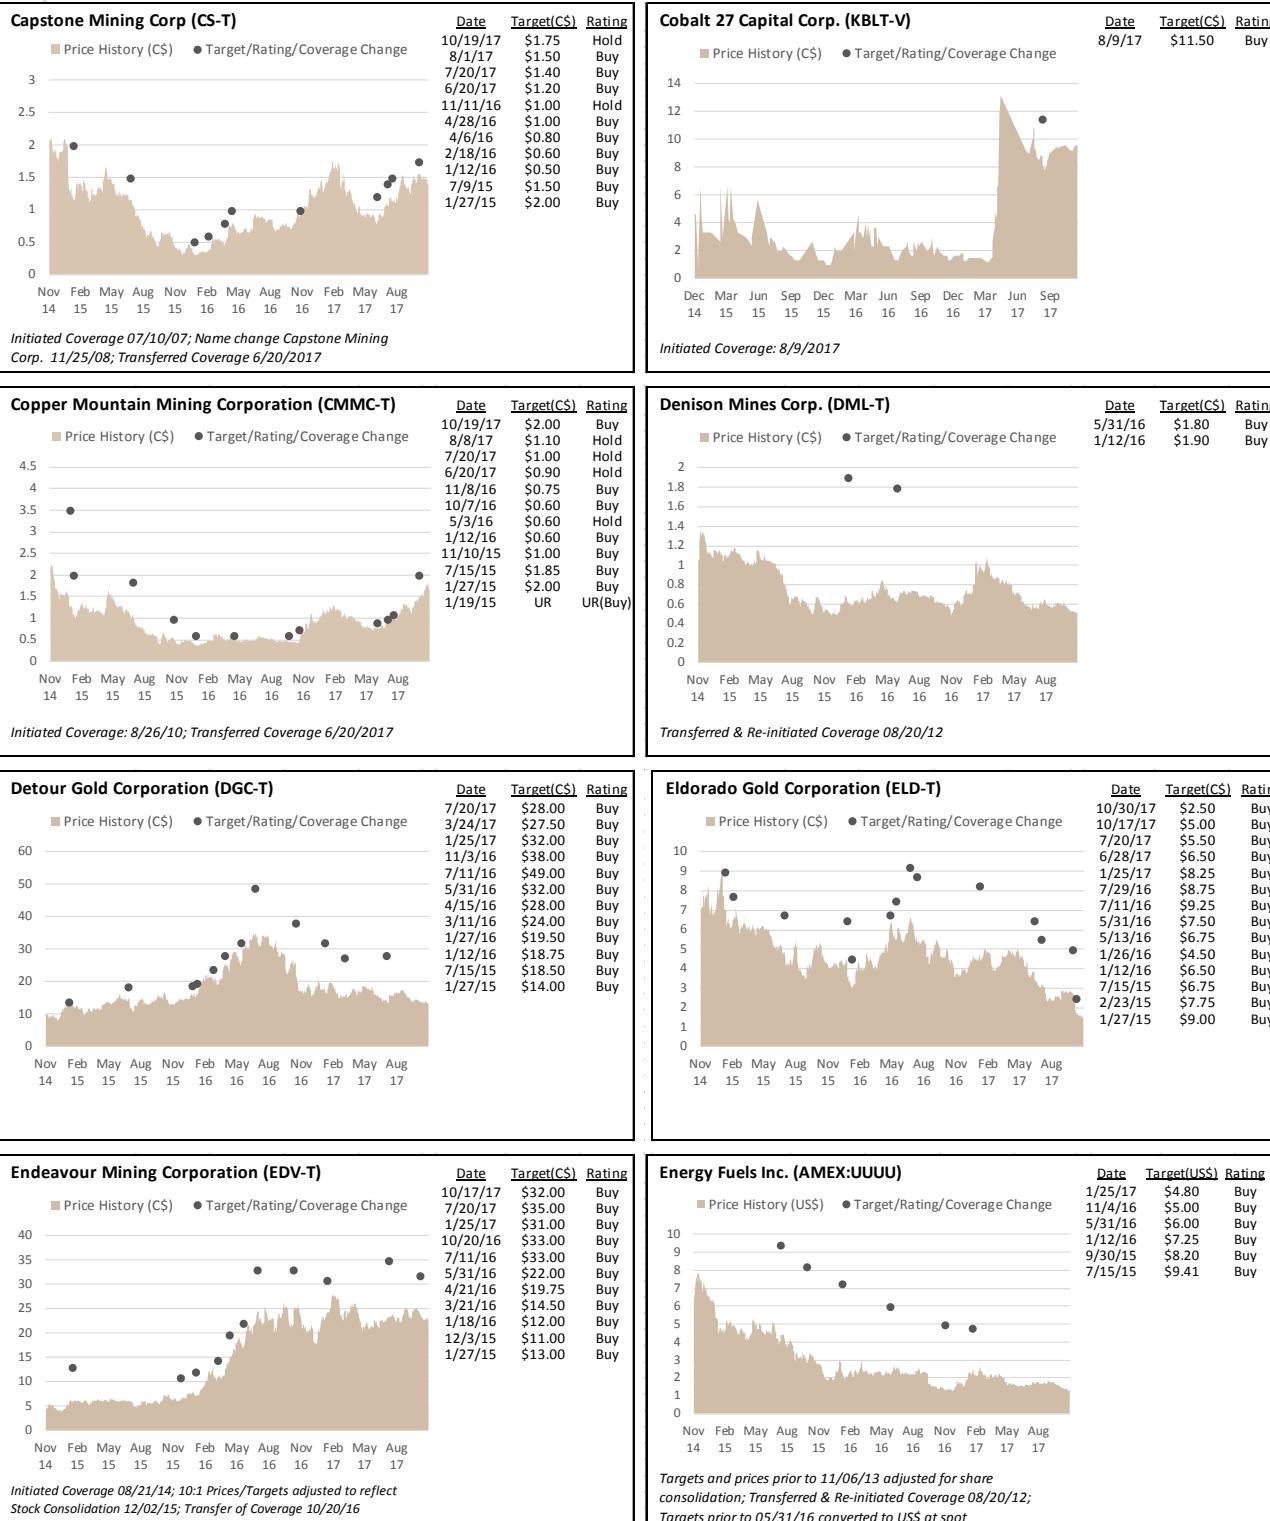

medium tolerance for risk and volatility and who are prepared to accept general stock market risk including the risk of a temporary or permanent loss of some of their investment capital.
