

A while ago I saw a pic of an unusual lighter, and I got intrigued by it.

Investigation learned it was a "New Method self starting lighter" made in the 1950's in Bradford, PA.

It uses catalys to ignite the lighter, and comes with a vial for spare fuel. 🤖

Platinum wires serve as a catalyser after the reaction is started by a little ball of "platinum black", wich produces heat when "Columbian Spirit" react with the air.

Needless to say I had to have one... 🤖🤖

After a long search, I didn't find one, but **twelve** of them new in box. 🤖🤖🤖🤖🤖🤖
